

YOUR COVID-19 VACCINE FACTS

IN THE COMING MONTHS, COVID-19 VACCINES WILL BECOME MORE WIDELY AVAILABLE

Currently the demand for the COVID-19 vaccine is higher than the available supply. Idaho's allotment continues to increase, but we simply don't have enough to give it to everyone at this time.

Please be patient and continue to mask up, stay 6 feet apart, practice good hand hygiene, and get tested if you are sick or have been around someone who is sick.

COVID-19 VACCINE PRE-REGISTRATION SYSTEM

Idaho has developed a pre-registration system for residents interested in being vaccinated. This critical system allows the public to connect with Idaho providers who are administering COVID-19 vaccine. To access the system yourself, please visit covidvaccine.idaho.gov. If you would like assistance with registration, please see the contact information below.

YOU SHOULD NOT HAVE TO PAY ANY OUT OF POCKET COSTS TO GET A COVID-19 VACCINE

The vaccine will be available to everyone who wants it at no cost, but your health care provider may ask for your insurance card to charge an administrative fee to your insurance company. If you do not have insurance, your provider can be reimbursed for the administrative fee from the Federal Provider Relief Fund.

YOUR COVID-19 VACCINE FACTS

COVID-19 VACCINES ARE SAFE AND EFFECTIVE

The safety of COVID-19 vaccines is a top priority. The Food and Drug Administration (FDA) has rigorous scientific standards vaccine developers must meet for safety, effectiveness, and manufacturing quality. COVID-19 vaccines were evaluated in clinical trials among tens of thousands of participants.

The vaccines will continue to be monitored for safety by multiple agencies including the FDA and the Centers for Disease Control and Prevention (CDC).

MILD TO MODERATE REACTIONS TO THE COVID-19 VACCINE HAVE BEEN REPORTED

These reactions may include pain or swelling at the injection site, muscle pain, headaches, and mild to moderate fever. These are normal signs the body is producing an immune response. COVID-19 vaccines with a two-dose series are more effective after the second dose, so some of these symptoms may be more pronounced after the second dose compared to the first dose.

You can use over-the-counter medicine like acetaminophen or ibuprofen to minimize side effects. If you can, plan to rest and take it easy following vaccination.
